GoldEx Knysna

Price Correction Time

July Newsletter 2026

Gold and silver dropped 8% and 14% respectively while Bitcoin was down 19% on May`s prices.

From what we understand, the war in Iran was the trigger for central banks to ease off buying bullion, which in effect reduced demand and prices.

We are witnessing a gold and silver ***"price correction"***, after 4 years of increase, especially 44% in 2025.

We expect gold prices to go down by a further 10% over the next 3 months, before stabilizing at $3,600 an ounce; which is where it was in September 2025.

Let`s see!
